

## NATIONAL DEFENSE BUDGET ESTIMATES FOR FY 1985

This book is intended to serve as a convenient source with respect to the FY 1985 budget estimates for National Defense. The material is organized into chapters as shown in the Table of Contents. Each chapter begins with a brief description of the material included and some highlight data, followed by material in greater detail.

The FY 1984 Defense Authorization Act (P.L. 98-94) provides for the establishment of accrual accounting for the military retirement system effective at the beginning of FY 1985. Under the accrual concept, the defense budget for FY 1985 will reflect payments to a Military Retirement Trust Fund for the accruing liability for retirement payments to the active duty force. These funds are in each Military Personnel account and are shown by service in the summary tables. Payments from this trust fund to the retired individuals will appear under the Income Security function of the federal budget at the time the payments are made. In all preceding years, Retired Pay, Defense is shown as a separate title on a cash basis, and is summarized in the Defense-Wide line.

## CHAPTER 1

### NATIONAL DEFENSE - AN OVERVIEW

The National Defense Budget Estimates for FY 1985 is intended as a convenient reference source concerning the Nation's defense budget. To be comprehensive, any such review should place the defense budget in perspective; it must be viewed in the context of the whole Federal Budget and the economy. To that end, the data included in this volume have been collected from a variety of sources, including several outside the Department of Defense, and are presented in a series of brief expository chapters intended to clearly detail the defense budget, in context, without either subjecting the reader to a deluge of numbers or failing to provide an adequate data reference source.

Chapter 1 is a fairly comprehensive overview of the defense budget, providing data in three of the standard classifications: total obligational authority, budget authority, and outlays. Each of the next six chapters is a review of aspects of the budget which have been of particular interest in years past and seem likely to be of continuing interest this year. For example, Chapter 5, "Pay Raises and Price Increases: Treatment of Inflation," addresses both the impact of price inflation and the techniques of measuring it.

#### Definitions

The Federal Budget is stated in terms of budget authority and outlays; the Department of Defense also describes its budget in terms of total obligational authority.

Budget Authority (BA) -- the authority provided by law to enter into obligations for immediate or future payment (outlays) of Government funds. Most Budget Authority is provided by the Congress in the form of appropriations and reappropriations. Budget Authority in an account can be increased or decreased by "transfer" to or from another account in current year; Budget Authority is identified to the year the authority takes effect.

Total Obligational Authority (TOA) -- TOA is a DoD financial measurement term which expresses the value of the DIRECT Defense program for a fiscal year.

Prior to FY 1979, TOA differed from Budget Authority primarily because of:

- (1) Congressional actions directing the transfer of prior year Budget Authority balances to finance direct programs (increasing TOA with no effect on Budget Authority);

(2) Application of shelf stock sales receipts to finance direct programs (increasing TOA with no effect on Budget Authority); and

(3) Budget Authority lapsing before obligations were incurred (decreasing TOA with no effect on Budget Authority).

Beginning in FY 1979, Congressionally-directed transfers of prior year Budget Authority balances which have the effect of extending the life of the appropriation are treated as both TOA and Budget Authority (The term "Reappropriation" applies when prior year balances that have expired or would otherwise expire are brought forward and the life of these funds is extended). As a result, the values of TOA and Budget Authority now are more nearly the same.

An additional difference is the Net Offsetting and Trust Fund Receipts which are deducted from Budget Authority, but have no effect on TOA. These are collections from the public - deposited in receipt accounts - that arise out of the business-type or market-oriented activities of the Government.

Outlays -- In government, as in private industry, there are time lags between the budgeting of funds (congressional appropriation), the signing of contracts or placement of orders (obligations), and the receipt of services or goods and consequent payment. The payment, the expenditure itself, is termed an outlay. Outlays occur when cash is paid or checks are written. The time lag between obligation and outlay results from the time required to render the service or complete the construction or production. The time lag between the time the bill is signed into law and the obligation is incurred (the order place) results from management actions to preclude the unnecessary stocking (warehousing) of goods and the necessity to obtain congressional approval in annual increments while operations go forward on a daily basis. In addition, for most procurement and construction projects, the Congress under the full funding concept approves sufficient funds to complete the project, even though production or construction may require several years. For example, shipbuilding appropriations are available for obligation over a five-year period. As a result of full funding and time to produce or deliver, the outlays in a year arise, in part, from obligations incurred during prior years. The future outlay data reported in this volume take such effects into consideraton and specifically recognize the changing mix of obligation types as procurements receive an increasing share of the budget.

### Budget Summary

The National Defense Budget is summarized in Tables 1-1, 1-3, and 1-8. Table 1-1, National Defense Budget Summary, presents the budget in each of the three terms defined previously. As the table composition shows, the National Defense Budget includes, in addition to the DoD budget, activities of other Federal Agencies which are in support of the National Defense Function. While those defense related activities are aggregated in Table 1-1 as DoE and other, later tables show them in greater detail. TOA is \$305,677 million in FY 1984, an increase of \$46,604 million over the FY 1984 TOA of \$259,073 million. The lower half of the table is in constant dollars set at expected FY 1985 purchasing power. In FY 1985 dollars, the FY 1984 TOA is \$270,839 million, or \$34,838 million less than the FY 1985 TOA. The FY 1984 to FY 1985 changes are shown in the last column of the table.

Table 1-2 shows the Federal Budget by function for the fiscal years 1983, 1984, and 1985. The functions are those used in the Budget of the United States and it is that document which is the source for Table 1-2. The four largest functions, in dollar terms, are Income Security, National Defense, Interest, and Health. Together they account for 86 percent of the FY 1985 outlays.

Table 1-3 which details the National Defense estimate by Act will prove invaluable to those who desire to either follow congressional action or refer to the original legislation.

### Budget Authority Summaries

Tables 1-4, 1-5, 1-6, and 1-7 present budget authority (BA) in expanded detail. These tables detail the current dollar and constant FY 1985 dollar BA amounts for the acts listed in Table 1-3. Data are presented for FY 1983, FY 1984, and FY 1985.

### Outlay Summaries

Tables 1-8, 1-9, 1-10, 1-11, and 1-12 present outlay detail analogous to the budget authority detail in tables 1-3 to 1-7.

### Reconciliations

The addendum to Tables 1-4 & 1-5 provides a reconciliation from the Defense Appropriation and Military Construction acts to DoD Budget Authority as shown in the President's Budget request. The addendum to tables 1-9 & 1-10 shows the same reconciliation for outlays.

## FY 1985 DoD B/A & OUTLAYS

( $\$$  IN BILLIONS)

## CHAPTER 2

### SUPPLEMENTS AND CONTINGENCIES

### FY 1984 AND FY 1985

Table 2-1 is a summary of the total Department of Defense budget estimates for FY 1984 and FY 1985 as reflected in the February 1984 President's Budget submission to Congress. The estimates are identified by the pertinent Acts, i.e., the Defense Appropriation Act and the Military Construction/Family Housing Act.

Table 2-2 reflects Budget Authority for supplementals for FY 1984, proposed legislation for FY 1984, and contingent amounts for FY 1985 for the National Defense function. The defense-related activities are identified by the other appropriation acts in which they are included. FY 1984 supplemental appropriations are reflected also for the defense-related activities. Military and civilian pay increases for FY 1984 (effective on January 1, 1984) were included in the Defense Appropriation Act, 1984, by the Congress which therefore precludes supplemental submission by DoD for this purpose.

Table 2-3 reflects FY 1984 Outlays for the supplemental and proposed legislation, and FY 1985 contingent amounts which include proposed legislation to support over twenty-seven pay and benefit initiatives submitted with this budget.

## CHAPTER 3

### LEGISLATIVE AUTHORIZATIONS

Almost all National Defense activities are within the legislative purview of the Armed Services Committees of the House and Senate. Practically all National Defense budget authority is subject to the annual appropriation process. The Department of Defense accounts for 95% of the National Defense function, and the Defense Appropriation Act itself is 91% of the total National Defense that is subject to appropriation. The remainder of the estimates is scattered under several headings.

Table 3-1 shows how the National Defense estimates relate to the annual legislative authorization process, as distinct from continuing legislation. As shown, \$242.6 billion is subject to specific annual authorization of the amounts to be appropriated. Another \$68 billion is covered by the annual authorization process through the authorization of military strengths. (In these cases, the appropriation dollar amounts are not specified in authorization legislation.) Effectively, the total annual authorization process encompasses the appropriated total.

Table 3-2 presents a summary of the authorizations enacted, the FY 1984 supplemental authorization request, and the current FY 1985 request for DoD. (This excludes contingencies and the Defense-related activities.)

Table 3-3 reflects personnel authorizations enacted and the current FY 1985 request for DoD.

Table 3-4 shows budget authority for items covered by the Defense Appropriation Authorization Bill, FY 1981-85. The FY 1981 through FY 1984 columns show amounts authorized and appropriated. The FY 1985 columns show the request now pending, and also the amounts that would apply including contingencies.

Prior to FY 1983, a matrix showing the relationship of the authorization request to the appropriation request would have been included in this Chapter. Differences in the two requests were the procurement of ammunition and other nonsystems procurement that were not subject to authorization action. Since FY 1983, all of the Procurement appropriations are subject to authorization. Therefore, FY 1983, FY 1984, and FY 1985 columns reflect comparable procurement authorizations.

NOTES: (1) FY 1982 includes Supplemental Authorization and Appropriation.

(2) FY 1983 includes Supplemental Appropriation.

(3) RD&E includes Special Foreign Currency Program (which is subject to authorization).

(4) In FY 1982, O&M authorized by Service in FY 1983, shown by appropriation breakout not shown.

(5) O&M authorized by Service in FY 1983, shown by appropriation for reference/comparison.

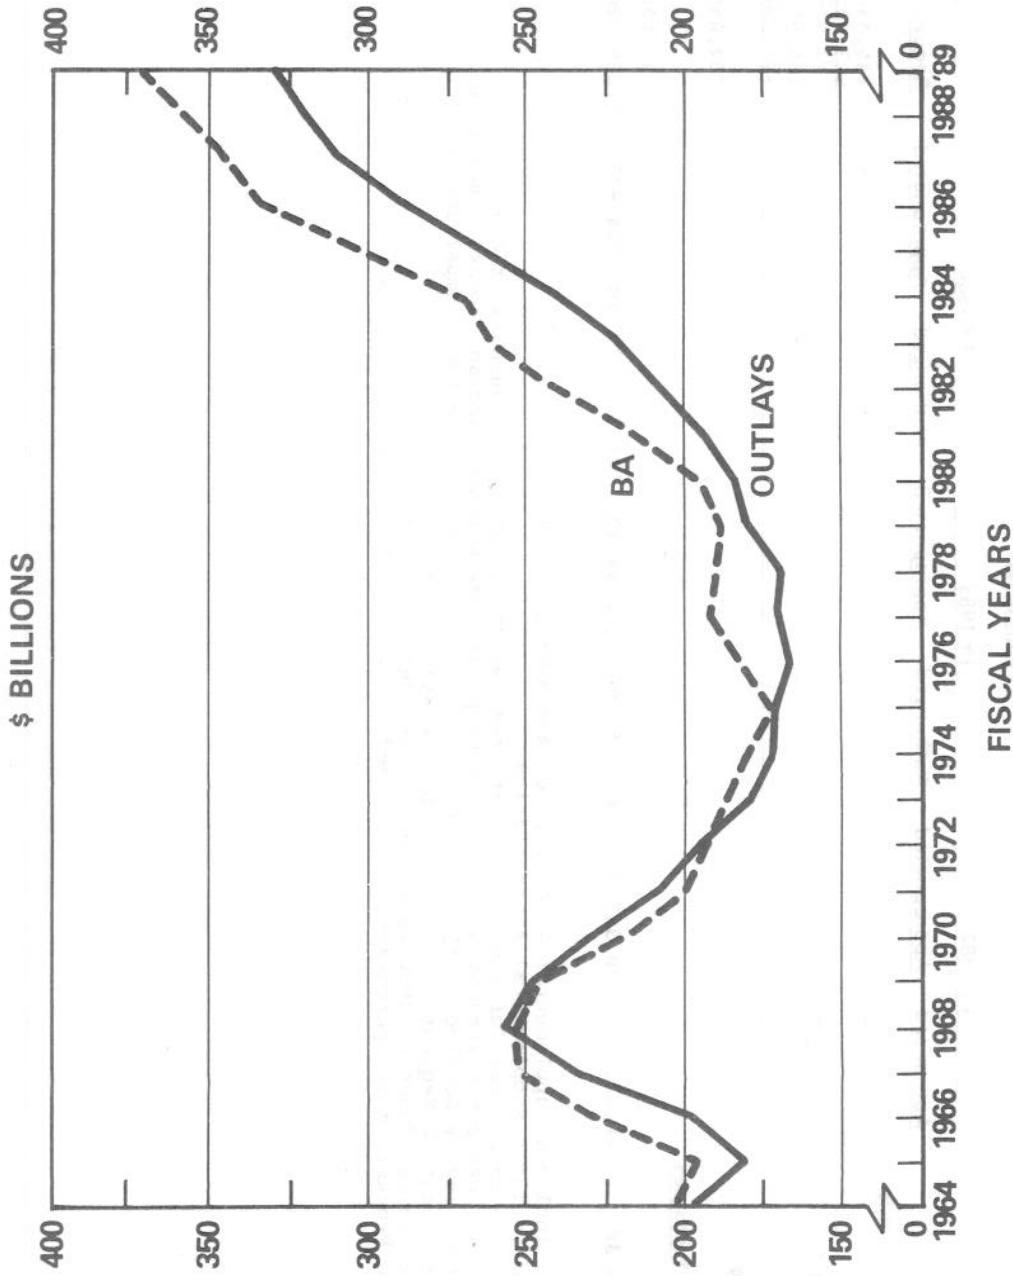

(6) O&M Authorization Request submitted by appropriation in FY 1984.

(7) Working Capital Funds subject to authorization beginning in FY 1985.

(8) Defense Production Act purchases not included in Procurement Title as of FY 1985.

## CHAPTER 4 CHRONOLOGIES

The matter of chronologies has assumed much greater importance because of the scorekeeping provisions of the Congressional Budget Act.

Table 4-1 presents a chronology of National Defense Budget Authority for FY 1983, beginning with the February 1982 estimates, amendments, congressional actions, other changes in CY 1982, and supplemental requests, to arrive at the FY 1983 column of the FY 1984 budget, continuing with other changes in CY 1983 to arrive at the final FY 1983 column of the FY 1985 budget.

Table 4-2 provides the same chronology for the related FY 1983 outlays.

Table 4-3 presents a chronology of National Defense Budget Authority for FY 1984, beginning with the January 1983 estimates and moving through amendments, congressional action and other changes in CY 1983, and supplemental requests to arrive at the FY 1984 column of the FY 1985 budget.

Table 4-4 shows the same chronology for the related FY 1984 outlays.

Table 4-5 is a detailed chronology of Department of Defense TOA, Budget Authority, Appropriations and Outlays from the initial budget estimates to the final FY 1983 column of the FY 1985 budget.

Table 4-6 provides comparable FY 1984 information.

Table 4-7 shows the starting point for FY 1985.

## CHAPTER 5

### PAY RAISES - PRICE INCREASES - AND TREATMENT OF INFLATION

#### I. GENERAL

Specific inflation indices are provided each year by OSD to the Services for their use in developing budget estimates. However, the correct application of these indices is not always apparent. The narrative portion of this chapter has been expanded in order to describe in detail the adjustments made to Department of Defense funding estimates for the effects of inflation. It contains definitions and explains some of the key terms and concepts involved in measuring inflation. It provides a history of the development of budgeting for inflation within DoD and details the current procedures for measuring and forecasting inflation.

##### A. Concepts and Definitions

###### 1. Inflation

Inflation is defined as an increase in the general level of prices in the economy. Inflation does not mean that prices rise evenly or that all prices are rising. Some prices may be constant and others actually may be falling. Prices of some commodities rise faster than others because of differences in the magnitude and direction of changes in supply and demand in various markets. There are many different measures of inflation:

###### a. GNP Implicit Price Deflator

The Gross National Product (GNP) implicit price deflator is the ratio of GNP in current prices to GNP in constant prices. It is a weighted average of the price indexes used to deflate the components of GNP. Because it is so comprehensive, the GNP index is generally regarded as the best single measure of broad price movements in the economy as a whole.

###### b. Consumer Price Index

The Consumer Price Index (CPI) is a monthly measure of average changes in the prices of a fixed list of goods and services purchased by urban families and individuals in urban areas across the country. It uses 1967 as the base period and relates all other figures to that date. Although it is often called the "Cost-of-Living Index" it measures only price changes, which are just one of several factors affecting living costs. The consumer price index for specific geographic areas does not measure differences in the level of prices among these cities, but only the average change in prices for each area

since the base period. An aggregate CPI is also published which provides a weighted average of the geographical area indices. The data are collected by the U.S. Bureau of Labor Statistics.

#### c. Producer Price Index

The Producer Price Index (PPI) is a monthly measure of average changes in prices received for commodities produced or imported for sale in commercial transactions by producers of a fixed list of commodities in all steps of processing. It uses 1967 as the base period and relates all prices to that date. PPI's can be organized by stage of processing or by commodity. The stage of processing structure organizes products by degree of fabrication (i.e., finished goods, intermediate or semifinished goods, and crude materials). The commodity structure organizes products by similarity of end-use or material composition. These data are collected by the U. S. Bureau of Labor Statistics.

#### d. DoD Purchase Index

The DoD purchase index developed by OASD(C) consists of the historical time series - based on actual DoD purchase price experience as calculated by the Commerce Department's Bureau of Economic Analysis (BEA) - that is linked to projections for the outyears based upon fiscal guidance from OMB.

In order to understand the concept of inflation and the differences in the many ways of measurement, it is necessary to understand the terms aggregate prices, annual rate of change and indexes.

### 2. Aggregate Price

The aggregate price is computed by taking a weighted average of the commodity prices, with each price weighted by an item's contribution to total expenditures. The aggregate price is thus a notional price that is developed to measure changes in inflation. The relative mix of the items considered, and the change of that mix over time, will greatly affect the amount of inflation that is measured.

### 3. Annual Rate of Change in Prices

The annual rate of change in prices is computed by dividing one year's aggregate average price by the preceding year's aggregate average price. The annual rate of change thus measures the year-to-year change in prices.

### 4. Index

The index is a time series. It is a weighted average of price changes expressed as a relative of average prices with a reference base of 1.0. It is calculated by setting the base

year equal to one, and then multiplying the index value of each year by one plus the annual rate of change of the next year. The inflation index thus measures the change in prices from a fixed point in time.

### 5. Current Dollars

Current dollars measure the dollar value of an item or service expressed in terms of the prices current at the time the item or service is procured. Current dollars are also called "then year" dollars. The term current dollars is often used interchangeably with "budget dollars" or "fully inflated dollars." These terms are used when prices contain all increases expected to occur in a program over the duration of the spendout of an appropriation.

### 6. Constant Dollars

Constant dollars measure the current dollar values adjusted for the effects of inflation. A constant dollar stream reflects the value of purchased goods and services for the time period of the stream if prices were the same in every year as in the base or reference year. Constant dollars do not contain any adjustments for inflationary changes that have occurred or are forecast to occur outside the base fiscal year.

### 7. Real Growth

Constant dollars are used to provide a measure of the real program content of the budget relative to the base year. Real program growth refers to the year-to-year change in constant dollars and is usually expressed as a percentage. Real program growth for a given year is computed by dividing the constant dollars for that year by the constant dollars of the previous year and subtracting one. Real growth always implies a relationship between two or more time periods.

### 8. Spendout Rates

The spendout rate (also called outlay or expenditure rate) is the expected cash flow for a given appropriation and is expressed as the percent of the appropriation expected to be spent in a given year. These rates are unique for each appropriation and range from two years in the pay accounts to as much as ten years in ship construction. Spendout rates are currently developed for each appropriation account total, including pay, fuel and other purchases. In addition, spendout rates are developed for each account excluding pay and fuel. This latter profile is useful in calculating price estimates for incremental purchases in the FYDP. The spendout rates for defense purchases in the POM preparation instructions (PPI) for the FY 1986-90 POM are provided in Table 5-10.

### 9. Outlays Index

The annual inflation rates for outlays are the basic components for creating indices which are used in all pricing computations. As the name indicates, an outlay index is used to convert outlays from current to constant dollars. An outlay index is used to compute the amount of inflation to be added to a base price, and to reprice estimates when a new set of inflation indices is used.

Annual rates are converted to a new escalation index for outlays by compounding the rates from a predetermined base year. The choice of a base year is largely unimportant for the purpose of calculating an index because once an index is computed with a given base year, it is relatively simple to convert it to an index with a different base year. The outlays indices for DoD appropriation titles in the FY 1985 President's budget are provided on the first page of Table 5-3.

### 10. TOA Index

A TOA index measures the impact of changes in inflation on TOA, given a specific fiscal year phasing of work performed (or outlays). It can be created from any phasing of the actual accomplishment of work or incurrence of costs for which TOA is expended. However, it is usually developed using the standard outlay rates for an appropriation. The TOA index measures the budgeted change of inflation from a fixed point. The TOA indices for each appropriation title in the FY 1985 President's budget are provided on the second page of table 5-3.

### 11. Base Year

The base year is a point of reference, usually a particular year, representing a fixed price level, and is expressed as 1.0 (e.g., FY 1985 = 1.0). Current prices are generally expressed as a percentage of prices for the average of the base year. Therefore, a current year index of 1.10 means that prices have increased 10 percent since the base period, similarly, an index of .90 means that prices have decreased 10 percent since the base year. Given a set of index numbers, the base year can be changed to any desired year in the set. This is done by dividing each index number to be converted by the index for the desired base year.

### 12. Compound and Composite Rates

The compound rates are obtained by multiplying the annual inflation indices provided by OSD/OMB using compound interest formulas. The compound rate is a measure of the change in inflation between two years and is used to convert constant dollars from one base year to another.

The composite rate, used when including inflation in TOA, not only incorporates compounding, but takes into consideration spendout rates and the impact of inflation over the entire spending pattern.

### B. Influences on Price Change

Price changes for purchases of goods and services result from a number of factors. It is often difficult to distinguish between the reasons for these changes and even more difficult to provide quantitative estimates of the extent to which each of these factors contribute to the total price change.

The most commonly thought of reasons for DoD purchase price change are changes in labor and material prices incurred by the producer. However, other factors such as changes in the business environment, availability of supplies and materials, schedule impacts, labor shortages, strikes and industrial capacity problems also contribute to a change in prices. While the impact of these factors may be determined for individual items, it is practically impossible to identify and quantify these changes at any level of aggregation. It is equally difficult to identify and quantify specific reasons for cost overruns or unpredicted shortfalls.

Inflation factors used in the budget represent the overall impact a series of economic events has on the purchasing power of the defense dollar for large groupings of purchases. The analysis of that impact on specific components can only be obtained by a detailed evaluation of the goods, services, and items purchased.

## II. Chronology of Inflation Guidance in DoD

Past federal budget practice set by OMB, fixed prices at the level in effect when the budget was developed and submitted to the Congress. Price increases occurring after a budget was prepared were absorbed or offset by efficiencies, economies, or program reductions. When year-to-year inflation was in the 2 percent to 3 percent range, these increases were generally considered to be within the range of budget estimating accuracy and were largely accommodated by the competitive savings and economies realized within reasonable financial management practices.

However well that approach worked for annual operating and minor procurement programs, it had shortcomings for longer term major investment programs which took three to five years to complete (from initiation to delivery). The 2 to 3 percent annual inflation rate exerted a cumulative upward pressure on the initial cost estimates for the duration of the program. Costs for short-term investment programs were reestimated each

year in order to keep up with this cumulative inflationary effect, and Congress was asked to provide additional funds for programs after their initial approval and appropriation. Reasons for cost increases over the life of the acquisition process include poor initial estimates, changes in requirements, characteristics, and technology. But the one common theme was inflation. To overcome this problem the "full funding" concept was initiated.

The rationale was that one Congress would fully fund any program it authorized and not require future Congresses to provide additional appropriations later. The Navy's shipbuilding program, because of the long time required to build ships, was the earliest program to be permitted to include an allowance for anticipated inflation in their budgets. Next, major RDT&E and procurement programs were allowed to include pricing based on anticipated inflation. Under the current provisions of OMB Circular A-11, DoD is permitted to add anticipated inflation in all accounts using the Administration's economic forecast. Specific indices are provided by OMB which reflect this forecast.

The following calendar provides a chronology of DoD inflation policy:

- May/June 1969 - DoD established the "best estimate" policy for costing major weapon systems showing ultimate amounts to be paid including economic factors.
- April 1970 - HASC Report requests DoD to include "...realistic measure of inflationary trends..." in the long-range projection.
- June 1970
  - OASD(C) memorandum issued directing departments and agencies to explicitly include inflation as a part of their "best estimate."
  - Also requested exception to Section 13.5 in A-11 to reflect future price increases in the budget for major weapon systems and major construction.
- Dec 1970 - OMB grants exception to A-11 for major systems and major construction.
- Nov 1971 - OMB reaffirms previous exceptions to A-11 and specifies that inflation rates should be consistent with forecast for implicit GNP deflator.
- Aug 1973 - DoD requests exception to A-11 be extended to purchases other than major systems such as O&M non-pay and minor systems and supplies.

- Sept 1974      - DoD reiterates need to expand A-11 exception to all purchases and also recommends one-shot budget submissions.
- July 1975      - Request of Sept 1974 is repeated again.
- Oct 1975      - The total procurement appropriation is priced in current dollars.
- July 1976      - P.L. 94-361, Section 806, requires President to include inflationary impact in Title III (Operation and Maintenance accounts) starting with FY 1978 budget.
- Oct 1976      - OMB exception letter confirms that inflation be included for the Operation and Maintenance appropriations.
- Jan 1977      - OMB publishes constant dollar time series in President's Budget document for total federal outlays.
- Aug 1977      - OSD rescinds use of service developed indices unless specific exception is granted and provides rates for general DoD use.
- June 1978      - Agency budget estimates will include inflation based on inflation rates provided by OMB. This policy is reflected in A-11 and permits consideration of price changes for goods and services other than federal pay.
- Jan 1982      - DoD was given permission to use higher inflation rates for major weapon systems than the rates projected for the general economy.
- Feb 1984      - DoD comfirms guidance originally published in August 1977 concerning the use of Service developed indices. The Services are encouraged to continue working with BEA to improve historical time series of DoD inflation experience.

### **III. MEASUREMENT OF INFLATION**

Accurate measurement of historical inflation and improved techniques for forecasting are critical to the integrity of defense programs. DoD's management of inflation is designed to protect this integrity by properly programing for inflation.

Inflationary pressure applies to all sectors of the economy and all federal programs - particularly DoD because of the high percentage of our programs which have long production lead times. Budgets weighted toward salaries and expenses of civil service personnel, whose costs are pegged to private sector comparability scales, are more controllable.

rates, productivity goals, and the GNP. National program priorities are balanced and program goals are defined as well as such specifics as the total number of federal employees. From these assumptions, OMB provides pricing guidance for all agencies to use in developing their budgets based on forecast changes in the GNP deflator. It would be inconsistent for the Administration to develop a macro-economic plan and then include prices that did not conform to expected results of that plan. OMB thus requires budget estimates to be consistent with the Administration's economic assumptions on the basis that these assumptions provide the best estimate of future inflation rates.

The ASD(C) receives economic assumptions from OMB and provides budget outlay rates and escalation indices to the Services. The nominal OMB escalation indices are tailored to individual appropriations by ASD(C). Rates are normally issued in December for the President's Budget and may be revised throughout the year. The ASD(C) rates apply to the Program Objectives Memorandum (POM), OSD/OMB Budget Submissions, the President's Budget Request, and the Five-Year Defense Program (FYDP). These inflation rates provide the link between the Administration's macro-economic forecast and the specific pricing contained in budget estimates.

## **V. ANALYSIS AND APPLICATION**

Two methods are used for incorporating the impact of inflation in the Department of Defense budget. One is used for pay and statutory items and the other for purchases of goods and services. The two types of items are subdivided into their component parts as follows:

1. Pay and items set by statute:
  - Retired Pay
  - Military Pay
  - Civilian Pay
  - Statutory Military Allowances
2. Purchases of goods and services:
  - Major Procurement
  - Other Procurement
  - RDT&E
  - Military Construction
  - O&M Excluding Pay and Fuel
  - Non-Statutory Military Allowances
  - Family Housing
  - Fuel

In the first instance, OMB requires that the budget reflect the pay rates that are in effect during the fiscal year in which

the budget is submitted. Funding for pay raises and legislative changes is included in a defense wide contingency account and requested in a supplemental budget request after the January budget submission. For the purchase of goods and services, OMB allows inflation to be included in the budget in a manner consistent with the Administration's economic forecast as described above.

While inflation rates are developed in terms of outlays (expenditures), price estimates for the budget must be developed in terms of TOA. In order to properly adjust price estimates for the effects of inflation, it is necessary to understand the relationship of outlays to TOA.

Both outlays and TOA are expressed in terms of a fiscal year. However, the term fiscal year used with outlays has a different meaning than it does used with TOA.

For outlays, the fiscal year indicates the time period in which the outlays were incurred. All outlays designated by a fiscal year occur during that single fiscal year. The outlays in a given fiscal year consist of amounts of TOA available from that year and previous years.

For TOA, the fiscal year indicates the time period in which the TOA (or budget authority) is first available for obligation and subsequent expenditure. While budget authority could be spent in that first year, it is normally expended over a period of several years. The BA of a given year appears as an outlay in that year and in subsequent years as work is performed and costs incurred. About 65 percent of FY 1985 BA will expend in FY 1986 and beyond.

The adjustment of price estimates to accommodate the impact of inflation is a complex operation which requires that the analyst understand the concept of inflation, the relationship between TOA and outlays, and the mathematics involved in manipulating and applying indices. The methodology to be followed varies for each price estimate depending upon the specific information available for that estimate. There are no simple "cookbook" rules or procedures which can be followed.

Any application of inflation estimates, whether for pricing or constant dollar analyses of real program levels, implicitly contains a large number of assumptions, many of which may not be valid for a specific application. The concepts of inflation, constant dollars, and real program growth are somewhat limited as they simplify a complex situation. The value and popularity of these concepts, however, stem from this simplicity, because they can provide a relatively easy way to understand the significance of the total DoD budget, or to measure an increase in areas like O & M. The danger of oversimplification or misuse

of these concepts requires those who use them to understand fully these limitations.

Many limitations are inherent in the use of any index. Inflation rates and outlay rates are average numbers which, while relatively accurate in the aggregate, are almost never accurate in specific applications. For example, an average of the increases in food prices would not imply that every item in the grocery store increased by that rate. The selection of a base year is always arbitrary, and comparisons to a base year are only valid to the extent that the mix of programs in the years being compared is similar to the mix in the base year. Finally, the approved inflation rate is itself only a forecast, subject to wide variations of accuracy, especially in the more distant future.

The calculation of real program growth is limited in that it separates all dollars into only two categories - inflationary and real program changes. It does not measure changes in efficient or effective use of funds. A price increase due to inefficiency is treated as a "real" program increase while, conversely, a price decrease due to an improvement in productivity is treated as a "real" program decrease. In both cases, of course, the "real" program does not change. This concept is only one way of measuring real program changes. Other measures, such as the number of ships or aircraft being procured or operated are often a more appropriate measure of real program.

## VII. FORECASTING INFLATION

In an environment of potentially high rates of inflation, defense planners require more timely information so that they can analyze better the differences between experienced and projected price changes. Then, efforts can be devoted to reduce the magnitude of these differences so that we will be faced with fewer decisions related to unforeseen cost growth.

Most projections of future inflation have not been accurate in recent years, principally because of the failure of standard econometric models to capture the total inflationary impact of fiscal and monetary policy decisions, as well as the excessive increase in fuel prices, which have caused additional pressures on defense prices. DoD has devoted considerable resources to the development of more accurate projections of future inflation in defense-related industries. We have been working with the Congressional Budget Office (CBO), the Office of Management and Budget (OMB), the Department of Commerce, and others to explore methods to improve forecasting techniques by underwriting efforts to prepare econometric forecasts on the level at which BEA calculates actual price changes. We encourage and support work in the development of better forecasting methods for major

weapon systems and for specific commodities such as fuel, specialty metals, and high technology products. The results of these studies are continually compared to the major economy-wide econometric models in order to determine the likely future impact of economic policy decisions and worldwide market conditions on the defense budget.

## **VIII. TABLES**

Table 5-1: Percentage increases by fiscal year in the pay and nonpay sectors of the DoD budget and a composite rate of pay and purchases. Also, the change in consumer prices (CPI), and the GNP price change are shown for comparison.

Table 5-2: Percentage changes in pay rates under the various systems and cost-of-living changes for 5-year intervals, covering the period FY 1950-85.

Table 5-3: Both TOA and outlay indices for each DoD appropriation title for the period FY 1945-89, on a base of FY 1985=100.

Table 5-4: Two DoD indices compared to selected economy-wide indices from 1945-1989, on a base of FY 1985=100.

Table 5-5: A history of military and civilian (general schedule) pay increases by date since 1945, up to the pay raises assumed for January 1, 1984 in the FY 1985 budget. The military pay raises shown are computed on the base of regular military compensation through October 1, 1973, and on the military pay base thereafter. (Regular military compensation includes basic pay and the allowances for quarters and subsistence, plus the tax advantage stemming from the fact that these allowances are not subject to the Federal income tax. The pay base includes basic pay, quarters and subsistence, with no adjustment for tax advantage.) The general schedule pay raise percentages through January 1984 are those announced by the Office of Personnel Management (formerly the Civil Service Commission (CSC)).

Table 5-6: Pay increases and military retired cost-of-living adjustments assumed in this budget for the period FY 1984-89.

Table 5-7: Five broad categories where price increases are measured and applied in the defense budget. The DoD inflation rate is a composite of these various pay raise and price assumptions.

Table 5-8: Long-range inflation projections at various forecast dates.

Table 5-9: Both current and constant dollars and the derived deflators for the four categories of civilian pay in DoD.

Table 5-10: Outlay rates to be used in developing outyear inflation factors for projecting future costs. These rates differ from those used to forecast outlay estimates from TOA in that they do not allow for lapses in the accounts and they only reflect the spending profile for purchases, excluding fuel whereas the rates used to estimate outlays from TOA levels reflect spending patterns of the total account, including pay and fuel.

Table 5-11: Composite TOA and outlay rates for selected DoD appropriation categories by year from FY 1945 to FY 1989.

# CHANGES IN DOD BUDGET AUTHORITY FY 1976-1985

## CHAPTER 6

### TOA, B/A, AND OUTLAY TRENDS AND PROGRAM CHANGES

Tables 6-1 through 6-5 and 6-8 through 6-13 are historical series and provide summaries typically used in analyzing trends in defense programs.

Table 6-1 provides a historical summary of TOA from FY 1947-1985 by appropriation title, in both current dollars and constant FY 1985 dollars.

Tables 6-2 and 6-3 provide TOA summaries by the major force programs.

Table 6-4 is a summary by pay, non-pay operations, and investment. This summary is especially useful since the investment program and the non-pay operations are identified on separate lines.

Table 6-5 is a summary by component. The Defense-wide total includes those items in the budget not identified to a specific component such as Retired Pay, Defense (until FY 1984); Contingencies, Defense; and Claims, Defense. Beginning in FY 1983, Family Housing costs are allocated to the Military Departments, and in FY 1985, the military retired pay costs were budgeted by the Services in their Military Personnel accounts.

Tables 6-6 and 6-7 are appropriation summaries in current and FY 1985 constant dollars for TOA, BA and outlays.

Tables 6-8, 6-9, and 6-10 are new this year and give the corresponding information for Budget Authority as shown in tables 6-1, 6-4 and 6-5 for TOA.

Tables 6-11, 6-12, and 6-13 were new last year and give the corresponding information for Outlays as shown in tables 6-1, 6-4 and 6-5 for TOA.

## CHAPTER 7

### DEFENSE, THE PUBLIC SECTOR, AND THE ECONOMY

Table 7-1 provides a breakdown of Federal outlays, FY 1945-1985. Federal outlays are grouped under these headings: National Defense, with a separate figure for DoD; Veterans, Space and International Programs; Net Interest; and Social and Economic programs. The latter category includes General Science and Technology (excluding the space program); Natural Resources and Environment; Energy; Agriculture; Commerce and Housing Credit; Transportation; Community and Regional Development; Education, Training, Employment and Social Services; Health; Income Security; Administration of Justice; General Government; and Revenue Sharing and general purpose fiscal assistance. Table 7-2 expresses the same data in FY 1972 prices.

Table 7-3 provides a similar breakdown of net U.S. public spending (federal, state, and local), FY 1945-1985. These figures exclude government enterprises (such as the postal service, utilities, and liquor stores) except for any support these activities receive from tax funds. Table 7-4 expresses the same data in FY 1972 prices.

Table 7-5 shows Gross National Product (GNP) for fiscal years 1947 through 1985 in current and constant FY 1972 dollars. The table provides a breakdown of GNP under these headings: National Defense, Other Federal, State and Local, and All Other. All data are on a National Income Accounts (NIA) basis. The table also shows the percentage distribution of the National Income Accounts by fiscal years.

Table 7-6 shows DoD employment (military and civil service by component and industry employment) for the years 1940-85. Table 7-7 shows U.S. employment and labor force data for the same period.

Table 7-8 is a master percentage table which shows DoD and national defense spending as a percentage of various economic and budgetary aggregates. Included are DoD and national defense outlays as a percentage of the Federal Budget and of net public spending. Also included is DoD employment as a percentage of public employment and the total labor force. The defense share of GNP on a budget basis is also provided.
